

# EntityBox Security Solution

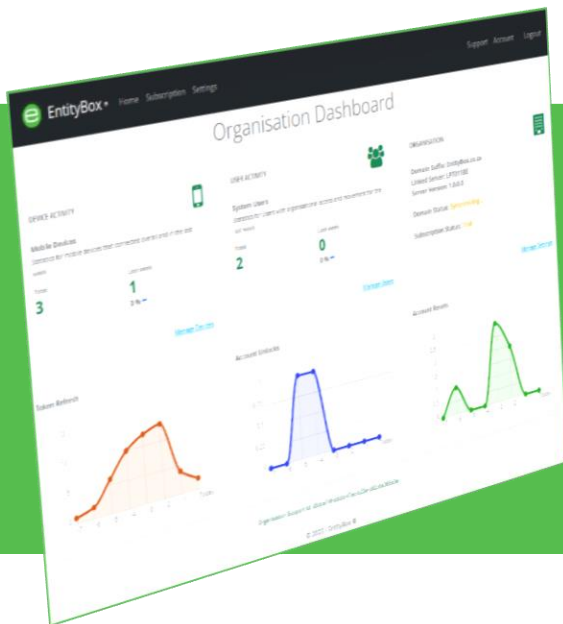

## Password Self Service Mobile Companion

 Microsoft  
 Partner

Businesses are migrating towards integration, automation and Software as a Service (SaaS) in the cloud, making use of mobile applications for in-house functionality.

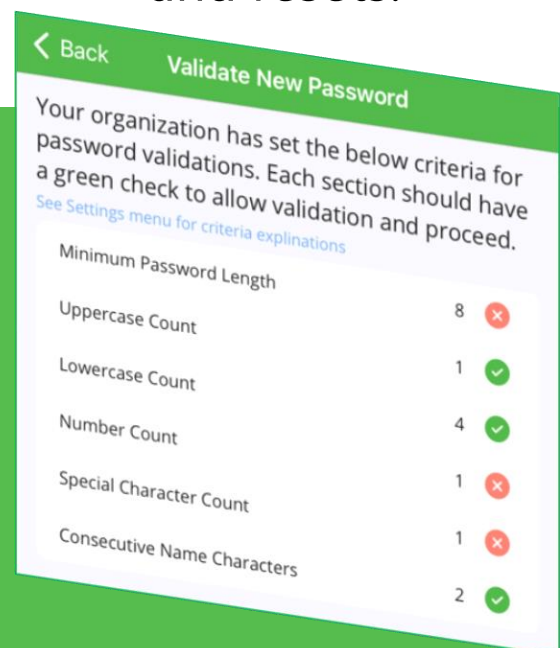

With all mobile activity stored securely, our online dashboard makes it easy to track usage of recent token refreshes, unlocks and resets.

Validate each password resets against organization policies with visual cue's.

Block passwords via an explicit Block-list or by Breaches count

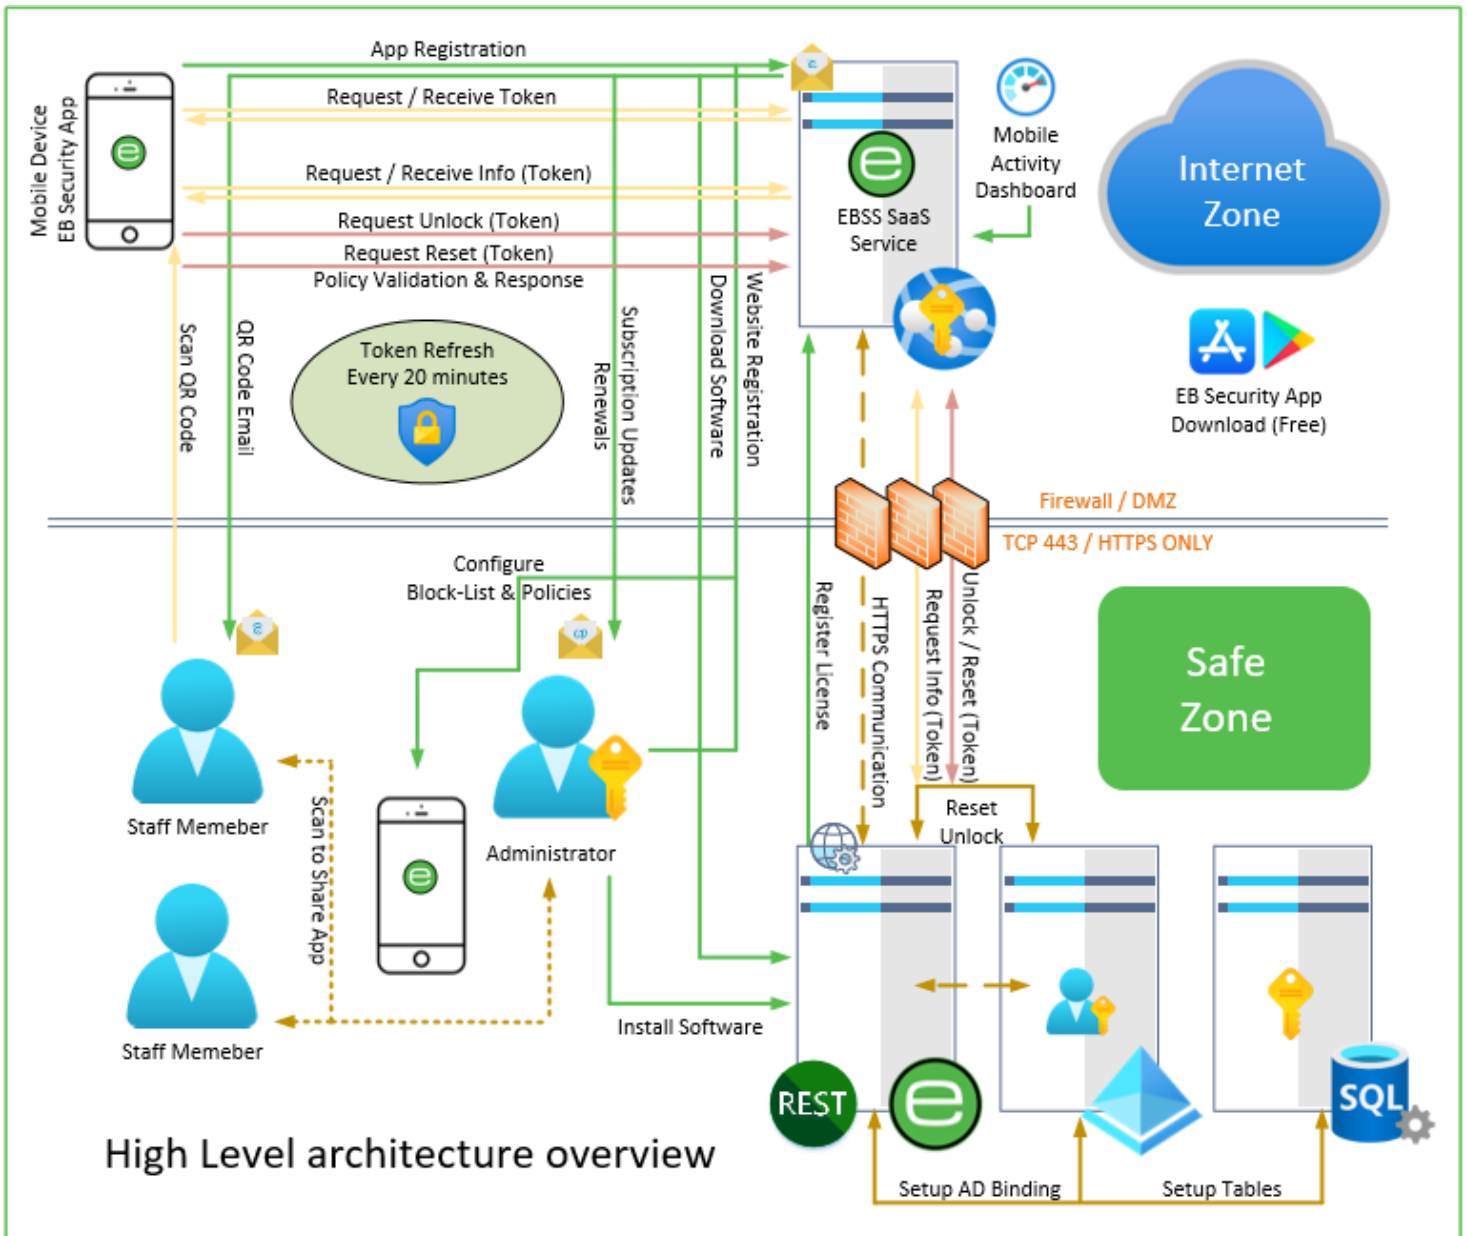

Validations & Breaches are checked against Have I been Pwned for violations

Security | Privacy | Authenticity | Encryption | Audits

Password resets are always a sensitive topic for any organisation, yet it plays a vital role every hour of every day. Security questions are always prompted with each discussion.

EntityBox Security will only store activity information online, all other information remains on-site next to your Active Directory securely. With a proprietary AES 256 Encryption algorithm on top of industry standards, all communications must flow over HTTPS securely to avoid interception. On-premise access must be limited and will only be known to our solution.

Although a password reset might be a simple task, the complexity in ensuring total security, privacy and safety is a lot more complex

Our mobile application is protected with a personalized pin and only valid & authorized tokens will allow application interaction.

Helpdesk calls for password resets can vary from 5 to 30 minutes depending on the complexity of your organisation. By allowing staff members to help themselves in an efficient, secure and safe manner, these calls can be reduced, leading to increased productivity, whilst maintaining compliancy and governance.

Enhance your IT service delivery and allow EntityBox Security to showcase trust, cutting out the productivity hampering nightmare of password resets for staff!

## Get started with these easy steps

- 1 Register online at <https://ebss.entitybox.co.za>
- 2 Download and install EntityBox On-Premise software
- 3 Configure perimeter security and publishing
- 4 Configure your organisation policies
